

THERAPY ROADMAP

Your Child's Journey

Therapy Start point

PHASE 1: REGULATION

A well-regulated brain is a brain that can learn. This phase focuses on developing sensory, emotional, and physiological regulation to prepare the child for meaningful engagement and learning.

SMALL WINS:

- Tolerates touch, sounds, or movement
- Sits for 3–5 minutes without distress
- Reduced hyperactivity or restlessness
- Accepts transitions with less resistance
- Begins to tolerate structured activities
- Less sensory seeking/avoidance intensity

PHASE 2: ENGAGEMENT

Learning begins through connection. This phase strengthens attention, interaction, communication, and social participation by fostering meaningful engagement with the world around the child

SMALL WINS:

- Responds to name (even inconsistently)
- Increased eye contact (even brief)
- Imitates simple actions (clap, tap, wave)
- Smiles or reacts socially
- Follows simple one-step instructions

Discharge & Maintenance

Therapy Stop point

Therapy Maintenance: Most Children will need a session once a month or once in three months

Beginner Hatha Yoga

PHASE 4: FUNCTIONAL INTEGRATION

Development reaches its fullest potential when skills are generalized across environments. This phase focuses on translating therapy gains into meaningful participation, independence, and quality of life.

SMALL WINS:

- Uses learned skills at home (not just therapy)
- Follows routines (brushing, dressing with help)
- Reduced problematic behaviors (hitting, biting)
- Better play skills (parallel → interactive play)
- Communicates needs more clearly
- Transitions between activities with minimal support
- Participates in group settings (school/play)

PHASE 3: SKILL DEVELOPMENT

Once foundational systems are established, children can develop the communication, motor, cognitive, and adaptive skills required for everyday functioning and lifelong learning.

SMALL WINS:

- Uses gestures & words to express needs
- Points or indicates wants
- Attempts to communicate instead of crying
- Jumps, climbs, or plays with better control
- Better hand use (holding crayons, objects)
- Matches objects / follows simple tasks
- Improved attention span (10-15 mins)
- Starts problem-solving in play

Developmental Screening & Goal setting
